DESIGN SCIENCE LAB

Designing strategies for reaching the United Nation's Millennium Development Goals

UPDATE

In the summer of 2006, the Asheville **Design Science Lab** was held at UNCA. Over 30 people took part in the program, with more than half the participants focusing specifically on local education, energy, and environmental issues. Focus groups developed various strategies to respond to global humanitarian and environmental issues by acting on a local level.

The greater Asheville community is invited to a showcase on the progress of the strategies initiated at the Design Science Lab.

Find out where the projects are in their development and discover how you can get involved...

Thursday, January 25, 2007

7:00 to 8:30 pm

At Jubilee!

46 Wall Street, in downtown Asheville

Energy in a Box is the community driven, energy-saving initiative put forth by the Local Energy group. Find out more about this project that can lower the overall energy consumption of our region.

Earth Voyage is a multi-media, experiential educational organization created by the members of the Local Education group.

Green Roofs The Local Environment group has begun an initiative to get more green roofs on buildings in Asheville. This group has worked with the City Council to get a green roof on Asheville's Civic Center; requests for bids have been sent out. They are now looking into a green roof for the W.C. Reid Center.
